5 (a.): Create a web application to demonstrate the use of different types of Cookies.

Step 1: Create the project

Open **Visual Studio** → **Create a new project** → select **ASP.NET Web Application (.NET Framework)** → give the project a name such as CookieDemo → choose **Web Forms**.

Step 2: Design the Web Form

Open Default.aspx and add these **Web Server Controls**:

- Label – "Enter Your Name"
- TextBox – txtName
- Button – btnSaveCookie
- Button – btnReadCookie
- Button – btnDeleteCookie
- Label – lblMessage

Use the following code inside the <form runat="server">:

```
<h2>ASP.NET Cookie Demo</h2>

<asp:Label ID="Label1" runat="server" Text="Enter Your Name:"></asp:Label>
<asp:TextBox ID="txtName" runat="server"></asp:TextBox>
<br /><br />
<asp:Button ID="btnSaveCookie" runat="server" Text="Save Cookie"    OnClick="btnSaveCookie_Click" />
<asp:Button ID="btnReadCookie" runat="server" Text="Read Cookie"
  OnClick="btnReadCookie_Click" />
<asp:Button ID="btnDeleteCookie" runat="server" Text="Delete Cookie"
  OnClick="btnDeleteCookie_Click" />
<br /><br />
<asp:Label ID="lblMessage" runat="server"></asp:Label>
```

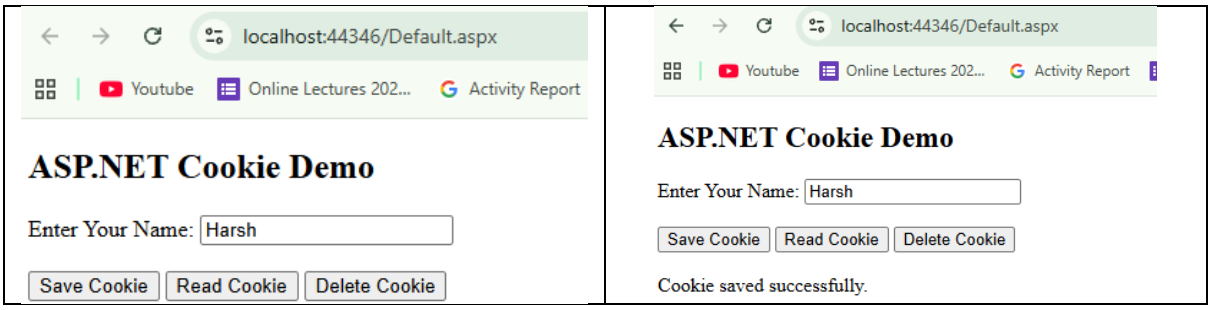

Step 3: Write code to create/save a cookie

Open Default.aspx.cs and write:

```
protected void btnSaveCookie_Click(object sender, EventArgs e)
{
  HttpCookie cookie = new HttpCookie("UserName");
  cookie.Value = txtName.Text;
  cookie.Expires = DateTime.Now.AddDays(7);
  Response.Cookies.Add(cookie);
  lblMessage.Text = "Cookie saved successfully.";
}
```

Here, UserName is the **name of the cookie** and the value entered in txtName is stored for **7 days**.

Step 4: Write code to read the cookie

Add the following event:

```
protected void btnReadCookie_Click(object sender, EventArgs e)
{
   if (Request.Cookies["UserName"] != null)
   {
      lblMessage.Text ="Welcome, " + Request.Cookies["UserName"].Value;
   }
   else
   {
      lblMessage.Text = "Cookie not found.";
   }
}
```

Request.Cookies is used to retrieve a cookie stored in the browser.

Step 5: Write code to delete the cookie

```
protected void btnDeleteCookie_Click(object sender, EventArgs e)
{
   if (Request.Cookies["UserName"] != null)
   {
      HttpCookie cookie = new HttpCookie("UserName");
      cookie.Expires = DateTime.Now.AddDays(-1);
      Response.Cookies.Add(cookie);
      lblMessage.Text = "Cookie deleted successfully.";
   }
}
```

A cookie is deleted by setting its expiry date to a date in the past.

Step 6: Run the application

Press **F5** or click **Start**.
